# National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. **Place additional certification comments, entries, and narrative items on continuation sheets if needed (NPS Form 10-900a).**

## 1. Name of Property

## 3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended,

I hereby certify that this \_\_\_ nomination \_\_\_ request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60.

In my opinion, the property \_\_\_ meets \_\_\_ does not meet the National Register Criteria. I recommend that this property be considered significant at the following level(s) of significance:

\_\_\_ national \_\_\_ statewide \_\_\_ local

Signature of certifying official/Title

Date

State or Federal agency/bureau or Tribal Government

In my opinion, the property \_\_\_ meets \_\_\_ does not meet the National Register criteria.

Signature of commenting official

Date

Title

State or Federal agency/bureau or Tribal Government

## 4. National Park Service Certification

I hereby certify that this property is:

\_\_\_ entered in the National Register

\_\_\_ determined eligible for the National Register

\_\_\_ determined not eligible for the National Register

\_\_\_ removed from the National Register

\_\_\_ other (explain:) \_\_\_\_\_

Signature of the Keeper

Date of Action

### Narrative Description

Mt. Lebanon Historic District  
Name of Property

Allegheny County, PA  
County and State

(Describe the historic and current physical appearance of the property. Explain contributing and noncontributing resources if necessary. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, setting, size, and significant features.)

### Summary Paragraph

The Mt. Lebanon Historic District is a primarily residential, early automobile suburb that includes commercial, cultural, and institutional resources within its boundary. The historic district is located in the suburban South Hills approximately 4.5 miles southwest of downtown Pittsburgh in Allegheny County, Pennsylvania. It occupies approximately 1,306 acres at the center of the Municipality of Mt. Lebanon, which is bordered by the City of Pittsburgh (north), Dormont Borough (northeast), Baldwin Township (east), Castle Shannon Borough (southeast), Bethel Park Municipality (southeast), Upper Saint Clair Township (southwest), and Scott Township (west). The historic district includes 38 historic residential subdivisions (many of which were platted in several stages), two commercial areas, nine churches, six public schools, two large parks, and a major cemetery (Figure 1). The historic district is generally centered on Washington Road, the main north-south road through Mt. Lebanon. The area is characterized by a ridge and valley topography that is particularly pronounced in parts of Mt. Lebanon and referenced in the names of many of its residential plans (e.g., Mission Hills, Lebanon Hills, Seminole Hills, Beverly Heights, and Colonial Heights). The historic district demonstrates Mt. Lebanon's development from a rural agricultural area that was transformed into a trolley suburb ca. 1901 and then experienced dramatic expansion as an automobile suburb during the 1920s and 1930s. The period of significance begins with the founding date of the Mt. Lebanon Cemetery in 1874 (the earliest extant resource in the district) and ends in ca. 1945 around the end of World War II. The early twentieth century trolley (which followed a path similar to the current light rail system with a section that ran down the middle of Washington Road through the Uptown commercial district) spurred an early wave of residential development in the middle of the historic district including parts of the Mt. Lebanon, Clearview, and Avondale Plans (see Figure 1). The numerous residential plans that were surveyed either in anticipation of or as a result of the 1924 opening of the Liberty Tubes (tunnels which provide automobile access to the area from Pittsburgh) are located throughout the historic district and represent the significance of the area as a premier example of an early automobile suburb. Many of the plans feature curvilinear roads, generous lots, shared greenspaces (traffic islands and parklets), and an attention to sightlines and visual appeal. The largest commercial area, the Uptown commercial district, stretches for several blocks at the northern end of Washington Road, and the smaller one-block long Beverly Road Commercial District is located in the Colonial Heights Plan in the northern part of the historic district along Beverly Road. The seven historic churches are located at intervals along Washington Road (two other churches were built after the period of significance), while the public schools are located near the northern, southeastern, and southwestern limits of the historic district with two schools situated along Washington Road at the heart of the district. The major greenspaces are Main Park and Bird Park located at the western edge of the district and the Mt. Lebanon Cemetery at the northeastern edge. Even though the Mt. Lebanon Historic District consists of 38 different residential subdivisions as well as commercial, cultural, and institutional resources, it constitutes a cohesive whole, whose complexity clearly demonstrates its importance as an early automobile suburb. Almost 97 percent of the historic district resources are domestic buildings (i.e., individual houses [89%], duplexes, and apartment buildings). Overall, the houses from this period that are found throughout Mt. Lebanon are high quality examples of historic revival styles including the dominant Tudor Revival and Colonial Revival styles as well as Georgian, Renaissance Revival, Arts and Crafts, Spanish Mission, and French Medieval examples. Craftsman Style bungalows and Foursquares are also found in large numbers. The historic district is notable for the rich variety of architectural expressions found in neighborhood after neighborhood. Contrary to the typical postwar suburban formula that repeats a small handful of house designs in each plan, Mt. Lebanon's residential streets generally feature a diverse collection of individual architectural designs, where harmonious streetscapes are achieved not by uniformity but through shared scale (generally two or two-and-a-half story buildings), materials (especially stone and brick), and setbacks. The historic district retains integrity. Its location, setting, design, materials, workmanship, feeling, and association all aptly convey a nuanced sense of its historic past. The inventory of the 4,252 resources within the historic district identifies 3,341 contributing buildings, 879 non-contributing buildings, 21 contributing sites, eight non-contributing sites, and three non-contributing structures. Contributing resources comprise more than 79 percent of the total resources, and 90 percent of the contributing buildings are individual houses. Less than 21 percent of the total resources are non-contributing, and 85 percent of the non-contributing buildings are individual

Mt. Lebanon Historic District  
Name of Property

Allegheny County, PA  
County and State

houses. A significant portion of the non-contributing houses, duplexes, and apartment buildings were built shortly after the period of significance but in the same styles and materials as the neighboring historic buildings, and, as such, they do not detract from the visual appeal of the historic district. Less than two percent of the total resources are associated with commerce and/or trade, and the combined total of religious, educational, and landscape resources is equal to just one percent of the total resources.

---

## Narrative Description

### Overview of the Historic District

The irregular boundary of the historic district has several determinants (see Figure 1). The historic district is fully contained within the Mt. Lebanon municipal boundary. Based on historic mapping, historic aerial photographs, and building permit dates, the boundary describes areas that were largely developed within the period of significance (1874-ca. 1945). Because these areas of development were determined in large part by the varied topography, they result in a logical but irregular boundary. Care was taken to ensure that the character of historic Mt. Lebanon was accurately represented by including commercial districts, cultural and institutional buildings, and apartments and duplexes as well as residential plans that showcase neighborhoods of varying size, style, and affluence. Major roads were chosen as boundaries where possible to increase the legibility of the boundary (e.g., Scott Road, Washington Road, Mt. Lebanon Boulevard, Cedar Boulevard, Cochran Road, Bower Hill Road, and McFarland Road). Lastly, an attempt was made to limit non-contributing resources that were either built after the period of significance or have compromised integrity. The resulting boundary, while irregular, provides a nuanced representation of the cohesive historic character of Mt. Lebanon.

Washington Road serves as a major roadway and central spine for the municipality as it gently snakes from north to south across the length of Mt. Lebanon and the historic district. At its northern end, it provides a common access point to Mt. Lebanon from the City of Pittsburgh. Near the top of a hill on the east side of Washington Road, two imposing stone historical revival churches signal one's arrival in Mt. Lebanon. Washington Road then continues to the south past Mt. Lebanon Cemetery as well as some scattered commercial and apartment buildings. A mix of historic and modern shops, restaurants, and apartment buildings characterize the several block long Washington Road commercial district known as Uptown. Historically, the trolley from Pittsburgh ran down the center of Washington Road from the northern edge of the municipality to Alfred Street, where it turned to the southeast. To the east and west of this section of Washington Road, Mt. Lebanon's trolley era plans were originally laid out (e.g., the Mt. Lebanon Plan, Clearview Plan, and Avondale), though they continued to be developed through the early automobile suburb era and after the period of significance. South of the Uptown commercial district, Washington Road gently winds past the entrances to many of Mt. Lebanon's residential plans from the 1920s and 1930s as well as individual historic houses with interspersed institutional and cultural resources. A section of later development along the east side of Washington Road between Park Entrance Drive and Crestvue Manor Drive has been excluded from the boundary.

Other major roads within the historic district include Beverly Road, which curves through the residential plans of the northern part of the historic district and features a one-block long commercial district located next to Lincoln Elementary School. Bower Hill Road runs roughly east to west and connects Washington Road to Scott Township. Cochran Road runs from the northwest to the southeast. It forms part of the western edge of the historic district boundary and meets Washington Road at an acute angle. Bower Hill, Cochran, and Washington Roads form a triangle of dense early residential development that includes numerous apartment buildings and part of the Uptown commercial district. Cedar Boulevard arcs roughly from east to west across the center of the district and forms part of the western edge of the boundary at Main Park.

The physical description of the historic district begins with the Mission Hills residential plan at the center of the historic district (to the east of Washington Road) and continues in a generally clockwise pattern to describe the other residential plans. Then it addresses the historic district's commercial districts, churches, schools, and greenspaces.

### Early Automobile Suburb Residential Plans

The most defining element of the early automobile suburb is the planned residential subdivision type that was developed from the early 1920s to the early 1940s, and the Mt. Lebanon Historic District contains 31 of them in addition to its seven earlier grid-layout trolley-era neighborhoods. The Mission Hills residential plan of 1921 represents the quintessential Mt. Lebanon early automobile suburb. The plan is accessed from the main thoroughfare of Washington Road. Mission Hills is laid out with long, gently curving roadways—Jefferson, Parkway, and Orchard Drives—that follow the contours of the steeply sloping site. A tour of the area given for the National Trust in 2006 described the remarkable

Mt. Lebanon Historic District  
Name of Property

Allegheny County, PA  
County and State

handling of the hilly terrain by noting that in the two blocks from its northern to southern limits or from the ridge top to valley stream, there is a difference in elevation of 130 feet which is equivalent to the height of a 12-story office building (Mt. Lebanon Historic Preservation Board 2011). Because the streets follow the hillside contours, this difference appears to be gentle and gradual. The long curving streets, generously sized lots with substantial setbacks, and minimal cross streets were made possible by the automobile, and the rolled curbs of the plan are an original feature that was designed with the protection of car tires in mind. Sidewalks, with a buffer of green lawn between them and the roadways, line the streets which are still occasionally faced with brick pavers. The entrance to the plan at Washington Road features Jefferson Drive split into two roadways separated by a narrow island with grass and trees in a boulevard-like arrangement (Figure 2; Photograph 1). The roads diverge and another grassy parklet that is landscaped with trees fills the sloping triangle of land. This generous use of common area parklets and greenspace, which is repeated elsewhere in the Mission Hills plan and in the other suburban-style residential plans in Mt. Lebanon, became a hallmark of the early automobile suburb design.

The Mission Hills plan was carefully designed with thought given to vistas and vantage points and with lot sizes ranging from 6,472 to 53,085 square feet with a mean of 12,974 square feet (Mt. Lebanon Municipality Geographic Information System 2012). Residents or real estate speculators chose their own architects and builders (as many as 50 different builders), which provided the great variety of housing types and styles found in the plan (Mt. Lebanon Historic Preservation Board 2011). The houses sit back from the sidewalks on generous landscaped lots and are generally two to two-and-a-half story tall brick, stone, or frame buildings with slate, tile, or asphalt shingle roofs. They typically exhibit a high degree of workmanship manifested in a picturesque handling of materials (e.g. stone quoins, decorative brickwork patterns, and half-timbering). They include Four Squares, Craftsman Bungalows, and English Cottages as well as Colonial Revival, Tudor Revival, and French Medieval works. Despite the wide variety of styles, there is a harmony to the streetscapes (Photographs 2 through 5). Photograph 3 includes a two-story brick Colonial Revival house with a symmetrical three-bay facade, an arched entrance with semi-circular fanlight, gable returns, and quarter-round attic story windows. It is flanked by two Tudor Revival houses that vary widely in their details. To the left, the gray stone house has a broad front porch and distinctive eyelid dormers, while to the right, the red and black brick house has heavy wood trim with a half-timbered entryway. Photograph 4 shows a two-story Craftsman style stuccoed house with a green tile roof. Its neighbors on the brick-paved drive also have distinctive tile and slate roofs with clipped gables and irregular profiles. Photograph 5 shows a prominent corner lot with a large brick Tudor Revival house that is characterized by overlapping steep gables, an irregular roofline and footprint, a variety of historical revival multi-pane window types, and a tall chimney. The corner lot house is designed to be seen from multiple vantage points as it has a highly visible lot. The houses of the Mission Hills plan were designed with the automobile in mind, and deed restrictions meant that garages were typically located at the rear of the property. Additions and alterations are generally confined to the rear as well which preserves the integrity of the streetscape. Some houses feature replacement roofs or windows but these are generally sensitively accomplished. Of the 342 house lots in Mission Hills and the adjacent related small plat additions, 82 percent are contributing resources. Additionally, five landscape elements, the grassy islands and parklets, are considered to be contributing sites.

South of the Mission Hills plan on the east side of Washington Road is another suburban style plan called Lebanon Hills that was first laid out in 1923. It has two entrances from Washington Road aptly named Main Entrance Drive and Park Entrance Drive. Park Entrance Drive has a boulevard style approach with roadways flanking a narrow parklet that recalls the entrance to Mission Hills. Three Lebanon Hills plan parklets are contributing sites. While this neighborhood was designed beginning in 1923, only the westernmost portion of the plan was built during the period of significance. The difference between the two eras of the plan (pre- and post-World War II) is evident with the change of brick pavers to asphalt and the appearance of split level and ranch houses in contrast to the historic revival houses lining the earlier section. The originally laid out sections with the historic brick pavers are included within the boundary even though a few of the houses at the eastern end of the plan were built after the period of significance; the other later houses, including those from the 1959 plat then called Main Entrance Manor, are excluded from the historic district boundary.

St. Clair Terrace is a small plan begun in 1925 that is nestled between Washington Road and Mt. Lebanon Boulevard. Its central feature is a cul-de-sac with a contributing central traffic island, and the size of its house lots is comparable to those in the Mission Hills plan (Mt. Lebanon Municipality Geographic Information System 2012).

Mt. Lebanon Historic District  
Name of Property

Allegheny County, PA  
County and State

The Hoodridge Plan, which is situated to the east of Washington Road and south of Mt. Lebanon Boulevard, was also developed in phases. The westernmost section of the plan (to the west of Vermont Avenue) was built during the period of significance with original plats dating to 1925 and 1926. Here again, gently curving brick streets are edged with rolled curbs, green buffer strips, and paved sidewalks. Two to two-and-a-half story historic revival houses executed primarily in brick and stone are sited with generous front lawns (Photographs 6 and 7). Photograph 6 includes a two-and-one-half story stone house with a baronial character. The Medieval Revival house features gabled wall dormers and projecting pavilions which contribute to the irregular profile of the slate roof. Photograph 7 shows the variety of building materials employed in the plan and even within a single composition. The Tudor Revival house at the right combines the constructional polychromy of multi-hued brick with half-timbering and stone trim. The Foster Elementary School is located at the eastern edge of Hoodridge Plan (see discussion of schools below). Part of the Seminole Terrace plan, which was platted in stages beginning in the late 1920s, lines the east side of Washington Road with closely sited houses that generally have steep front yards and whose rear garages are accessed by an alleyway. Eight houses at the center of this grouping and 18 houses on the opposite side of Washington Road (part of the Seminole Hills plan, see below) were built after the period of significance and are non-contributing resources of the historic district.

At the southern end of the historic district on the west side of Washington Road are two suburban style plans—Beverly Heights and Seminole Hills—that echo the style of the Mission Hills layout, though their gently curving streets tend to be steeper and their lots tend to be smaller. At the entrance to Beverly Heights, there is a large landscaped park (a contributing site) that fills the convex triangular hillside formed by Woodhaven Drive, Longuevue Drive, and Spalding Circle as if it were a natural amphitheater (Figure 3; Photograph 8). Both plans have a mix of historic revival houses lining their streets, and several areas where the terrain is steep enough that sidewalks have been omitted. Seminole Hills has two contributing triangular parklets that complement the curvilinear layout of its streets (Photograph 9). Like the traffic islands and parklets found in the other plans, the one shown in Photograph 9 has rolled curbs and a gently curving outline. It is planted with grass and shade trees, and it provides a welcome shared greenspace for the neighborhood. Seminole Hills was laid out in 1925, but almost 36 percent of its houses (particularly those clustered near the southern end of the residential plan and lining Washington Road) are non-contributing resources that were built after the period of significance (Mt. Lebanon Municipality Geographic Information System 2012). Because these later houses are interspersed with historic houses (as opposed to being a clearly defined later expansion as seen in Lebanon Hills), they are included as non-contributing resources within the historic district boundary. It is worth noting that a significant proportion of these non-contributing houses that were built after World War II adopted the prevailing styles and materials of the neighborhood and, therefore, do not detract visually from the cohesiveness of the historic district. Beverly Heights, which was also laid out ca. 1925, has a greater concentration of contributing properties (88%) built within the period of significance than Seminole Hills. Markham Elementary School and Bird Park are located to the north of Beverly Heights. The small Forest Glen plan consists of just 21 lots laid out around a private lane that ends in a cul-de-sac at the southwestern edge of the district boundary. Only six of the Forest Glen houses were built within the period of significance.

The Mt. Lebanon Historic District Boundary includes the original part of the Washington Park residential plan that was laid out in 1929. The plan includes Mayfair Drive, Vernon Drive, Martha Avenue, and Virginia Way and provides a relatively regular grid layout of tree-lined streets with sidewalks and standard (not rolled) curbs. It does maintain the ample setback and wide variety of high quality, revival style houses found in the more curvilinear suburban style plans. Washington Park is bordered by several community amenities, including Main Park (to the northwest), Mt. Lebanon High School (north), two churches (southeast), and Bird Park (south). Only 11 percent of the houses in Washington Park are non-contributing; some were built after the period of significance and a few lost their integrity due to substantial front additions and altered fenestration patterns. The Hollywood Gardens plan from 1924 is located on the opposite side of the high school campus to the north of the Washington Park plan. This plan developed slowly and by the end of the period of significance, less than half of its lots had houses.

At the center of the historic district is a triangle of land defined by three of Mt. Lebanon's main roadways: Cochran Road (west edge), Washington Road (east edge), and Bower Hill Road (north edge). The plans included within this roughly 179-acre triangle are not laid out along gently curving streets with landscaped parklets. Here, several conflicting grids intersect in a tight network of residential streets, some of which date to Mt. Lebanon's trolley-era development starting ca. 1901 (Photographs 10 and 11). The earliest plans include the Mt. Lebanon Plan (1901), Clearview Plan

Mt. Lebanon Historic District  
Name of Property

Allegheny County, PA  
County and State

(1902), and the Mt. Lebanon School Plan (ca. 1905), which were designed to take advantage of their close proximity to the trolley line that ran down Washington Road and the adjacent Uptown commercial district (Figure 4). Foursquares and one-and-one-half story front gable houses are prevalent examples of trolley era development here as are densely-sited smaller lots with only modest setbacks from the street. However, these plans do not provide a discrete time capsule of Mt. Lebanon in the 1900s and 1910s. They are also characterized by houses, duplexes, and apartment buildings from the 1920s, 1930s, and later eras (Photograph 12). Accommodation for the hilly terrain is often made with tall staircases leading from steep front yards to the houses (Photograph 13). The Lebanon View plan from 1921 occupies the southern tip of the triangle. It was developed as an early automobile era suburb, because it is located farther from the historic trolley route and commercial center. Other early automobile era plans within this area include Landsdale Place, Bower Hill Place, Mt. Lebanon Country Club Plan, and Albion Place, which are all located to the south of Bower Hill Road. Just over 85 percent of the properties within this central triangle of land are contributing resources.

Three plans on the opposite side of Washington Road were also laid out in the trolley era though most of their buildings date from the 1920s: Central Square (ca. 1905), Mt. Lebanon Park Plan (1902), and Avondale (1908). Central Square is home to a cluster of brick apartment buildings that were constructed ca. 1926. The Mt. Lebanon Park Plan is laid out along Shady Drive East, which is home to four early 1930s three-story brick apartment buildings executed in a restrained Renaissance Revival style as well as 24 mid-1920s duplexes (Photograph 14). Both types of buildings have a modest setback from the street. The duplexes are densely arranged and often separated by only a narrow walkway or by shared driveways leading to detached garages that stand at the rear of the lots. The northeastern border of the large residential subdivision of Avondale follows the historic trolley route (and the current route of the light rail system). It retains a grid layout of streets without much accommodation for variations in the hilly terrain. The houses in Avondale are generally two to two-and-a-half story single dwellings that represent a wide variety of historic revival styles. The brick, frame, and stone houses have a modest setback from sidewalks that abut the road (Photographs 15 and 16). Photograph 15 shows several houses from the early to mid-1920s including both brick and (relatively rare in Mt. Lebanon) frame examples. The eclectic Colonial Revival style house in the foreground with columned portico and arched entryway features a glazed green tile hipped roof with clipped gable dormers, which is a roof style that is more common in Arts and Crafts and Spanish Mission styles. Photograph 16 shows the sidewalk abutting the road without any grass buffer as well as the variety of architectural styles and materials.

Continuing clockwise to the north from Bower Hill Road, the northern portion of the historic district is generally characterized by residential plans from the 1920s and 1930s. The exception is the Orchard Hill plan of 1916 located at Bower Hill Road and Washington Road, whose proximity to the historic trolley line encouraged its early platting. Its houses date from the mid-1910s through the 1930s, and many of the earliest houses have rear detached garages. The other plans in the northern portion of the historic district vary in size from very modest layouts of only 13 lots (Mahr Ridge Gardens, 1931), 15 lots (Ralston Place), or 18 lots (Wasson Manor) to the largescale Virginia Manor plan which was laid out with more than a dozen additions from 1926 to 1937. Many of the smaller plans did not have the ample acreage for the long gently curving streets of the Mission Hills plan, but they still found ways to incorporate greenspace elements and controlled sightlines in their planning. At Marlin Place (ca. 1924), the layout of the residential plan centers on two north-south streets (Marlin Drive East and Marlin Drive West), which follow a slight S-curve to form a roughly triangular traffic island and parklet that is planted with trees (Figure 5). The Colonial Heights plan from 1924 generally follows a rectilinear layout with the notable exception of the curving Beverly Road with its small commercial district. Its house types include several bungalows like the Dutch Colonial-influenced designs on Overlook Drive, with their side gambrel roofs and flaring eaves (Photograph 17). The 1923 residential plan of Parker Gardens is located to the north of Colonial Heights (Photograph 18). It too contains a rich variety of historic revival styles and expressions (including occasional eccentricities like the Tudor Revival house with an overhanging half-timbered second floor seen in Photograph 19) that contributes to a lively but harmonious streetscape. Like Mission Hills, it has brick paved streets with rolled curbs, green buffers, and paved sidewalks, but the layout does not diverge often from the rectilinear grid. The neighborhood also features several duplexes with ensembles of buildings representing both a variety of historical styles and a roughly uniform collection of early modern types (Photographs 20 and 21). Fully encapsulated within the boundary of Parker Gardens, the small Parker Terrace plan from 1927 includes the 27 properties lining Dan Drive with lots that are slightly larger than the surrounding plan (Mt. Lebanon Municipality Geographic Information System 2012). Notably, many of the houses on Dan Drive were designed with two-car garages that are accessed from the front of the property; the long skinny garages store

Mt. Lebanon Historic District

County and State

two vehicles end-to-end. The Kennedy Forest Plan (1936 and 1937), Oak Ridge Manor (1928), and Mt. Lebanon Country Club Plan No. 2 (1922) at the northern end of the historic district were laid out in stages and developed as early automobile suburbs. Immediately to the east of Lincoln Elementary School is a row of one-story Tudor Revival-influenced cottages on North Meadowcroft Avenue that was not built as part of a residential subdivision (Photograph 22). The stucco and brick houses with half-timbered front porch gables were constructed by the Commonwealth Trust Company of Pittsburgh, which also built twelve small houses on the west side of the street (G.M. Hopkins & Co. 1940). Those houses have since been removed and replaced by a playground called Meadowcroft Park, which is considered to be a non-contributing site since it replaced historic era resources.

In the northwest corner of the historic district, there are several small plans, including the Caste Plan (1940), Pendale Gardens (1928), the Urben Plan (1936), and Cochran Place (1928). They share the territory with the Virginia Manor plan which was laid out in multiple stages between 1926 and 1937. Virginia Manor, one of Mt. Lebanon's best known plans (in addition to Mission Hills and the Hoodridge Plan), lies at the northwestern limit of the historic district. Some of Mt. Lebanon's largest lots and largest houses are located here on suburban style streets that curve along the contours of the ridge. The part of Virginia Manor that centers on Osage and Valleyview roads was laid out in the late 1930s. It adheres to many of the same principles established in Mission Hills with roads that follow the land contours, a sensitivity to creating vistas and thoughtful streetscapes, and deed restrictions but with notably few sidewalks. Unlike the other plans, Virginia Manor was developed with the added restriction that proposed house designs had to undergo an architectural review (Photographs 23 through 25). Photograph 23 shows the sprawling Georgian Revival house with a central three-bay main block and flanking wings that is sited near the entry to the plan. The side gable house features gable returns, a dentilled cornice, Doric pilasters, and two broad brick chimneys. The houses in Photograph 24 draw from English styles ranging from medieval to late nineteenth century sources. Photograph 25 shows the deep setback of the historic revival houses and demonstrates that, despite the different styles and varying treatments of the stone building material, the neighborhood has a cohesive feel. Approximately 80 percent of the houses in this section of Virginia Manor are contributing resources, with most of the non-contributing resources clustered in the northwestern section of the plan.

### **Other Amenities**

Characteristically, early automobile suburbs are defined not only by their residential plans but also by supporting amenities, including business and/or commercial centers, religious and educational buildings, and greenspaces. There are two commercial districts located within the Mt. Lebanon Historic District: Uptown and Beverly Road. Uptown, which is located near the northern end of Washington Road, has a mix of historic and modern shops, restaurants, and apartment buildings (Photographs 26 and 27). Photograph 26 shows the Home Land office building from 1927, which houses the offices of the Stevenson Williams Company, a local real estate developer. The three-story stone Neo-Classical building at 666 Washington Road features fluted Doric pilasters, a frieze with triglyphs and metopes, and a pedimented parapet. The colorful marquee was added after the period of significance, and the ground level storefronts have been altered with large plate glass windows, replacement glass and metal doors, and a Post-Modern door surround. Photograph 27 shows several commercial buildings including a three-story Gothic Revival example with a glazed terracotta façade, a restrained one-story Classical Revival building with several storefronts, and a modest two-story building with decorative brickwork on the upper story and replacement fenestration on the ground level. Stretching for several blocks, Uptown preserves dozens of historic commercial buildings that are generally one to three-story tall masonry structures that stand side by side and abut broad sidewalks. The historic commercial buildings generally retain the materials, design, and workmanship of their upper stories, but they often feature storefronts that have been altered with large plate glass windows and non-historic facing materials. They include buildings designed in the Gothic Revival, Classical Revival, and Craftsman styles and often retain original fixtures like sculptural decoration, canopies, and marquees. In particular, the Mt. Lebanon Municipal Building of 1929 by William Henry King Jr. (710 Washington Road) is a three-story, pale brick, Art Deco building with a stepped corner tower and elaborate decoration including architectural sculpture and aluminum chevron panels (Photograph 28). Despite several non-contributing resources (including a multi-level parking garage, a block-long hardware store, a seven-story International Style modern office building, and a 15-story apartment high-rise), the Uptown commercial area along Washington Road is central to the significance and development of the historic district and retains the integrity to aptly convey that historic sense.

Mt. Lebanon Historic District  
Name of Property

Allegheny County, PA  
County and State

North of Bower Hill Road, a second commercial district is located along Beverly Road with a one-block long stretch of shops and restaurants (Figure 6; Photograph 29). Photograph 29 shows the range of one and two-story buildings on the south side of Beverly Road. Many of the commercial buildings have altered first floor storefronts with plate glass windows and non-historic facings, but generally the upper stories of these buildings retain historic details that express the design, materials, and workmanship of the structures.

The religious buildings in the historic district continue the tradition of historical revival style architecture found in the residential plans. At the north end of Washington Road at the boundary of both the historic district and the municipality stands the imposing twin towered Mt. Lebanon United Presbyterian Church from 1929 (255 Washington Road) (Photograph 30). The Gothic Revival Presbyterian church is executed in monochromatic gray stone square towers and elaborate tracery. The church has double pointed arch entries atop a flight of stairs that spans the modest setback from the road. The pale gray stone of the Presbyterian church contrasts with the constructional polychromy of the walls and roof tiles of the neighboring St. Bernard's Roman Catholic Church at 311 Washington Road (Photograph 31). The Late Romanesque Revival Catholic church was designed by Comes, Perry and McMullen architects and built from 1933 to 1947. The tall westwork façade of the church with its twin turrets and flat buttresses has a minimal setback from the street. The tall square-plan bell tower marks the transept crossing of the church. A few blocks south at 799 Washington Road, the stone Gothic Revival Southminster Presbyterian Church by Pringles and Tufts architects from 1929 stands with an attached cloister and education wing (Photograph 32). St Paul's Episcopal Church at 1066 Washington Road is an English Gothic stone church from 1930 with a prominent front gable, pointed arch windows, and flat buttresses. The neighboring First Church of Christ, Scientist at 1100 Washington Road is a red brick Colonial Revival church with a Corinthian columned portico and a pointed steeple. The 1939 church building was designed by Charles Draper Faulkner. The Unitarian Universalist Church of the South Hills occupies the former Sunnyhill 20-room mansion at 1240 Washington Road, which was designed as an English Cottage with a faux thatched roof by Stanley Roush in 1920 with grounds designed by the Olmsted Brothers. Two additional churches in the historic district were built after the period of significance: the Mt. Lebanon Christian Church (367 Cedar Boulevard, 1951) and the Mt. Lebanon United Lutheran Church (975 Washington Road, 1954).

All of the public schools built in Mt. Lebanon from 1917 to the 1930s were designed by the Pittsburgh architectural firm of Ingham & Boyd. The firm used a consistent palette of pale buff brick, stone, and terracotta elements with a Classical or Neo-Classical Revival style treatment to establish a relationship among the schools. The historic district includes six of these buildings as contributing resources. Washington Elementary School, a two-story brick Classical Revival school from 1922, and Andrew W. Mellon Middle School, a three-story brick Neo-Classical Revival school building from 1939 stand next to each other at 735 Washington Road (Photograph 33). Washington Elementary has a classic H-plan and a one-story projecting front entrance loggia with a triumphal arch motif and roundels. The projecting terracotta cornice with scrolls and fleur-de-lis enlivens the otherwise severe composition. Classrooms were added to the rear of the building in 1926 and 1927 (Donnelly 1981b). Lincoln Elementary School from 1925, located at 2 Ralston Place, is a typical Neo-Classical school design with projecting pavilions at either end of the main block. The Classical Revival style of Markham Elementary School from 1929 at 165 Crescent Drive is manifested in its ordered façade with colossal fluted Doric pilasters and corbelled entry moldings. While the formal layout of the building as a large two-story block is similar to the earlier schools, Foster Elementary School at 710 Vermont Avenue, which was built in 1941, diverges from the Classical Revival style with two-tone banding and rounded walls at the entry that evoke an Art Moderne sensibility.

The large and sprawling campus of Mt. Lebanon High School, which is adjacent to Main Park at 155 Cochran Road, was built in several stages and is currently undergoing renovation. The three-story, flat roofed main high school building was constructed in 1930 to designs by Ingham & Boyd. The building incorporates a stripped down Neo-Classicism that is tempered by Art Deco elements including sculpted *bas relief* panels representing gods and goddesses of learning and wisdom (Donnelly 1981a). Its prominently sited main elevation stretches for 58 bays along Cochran Road and is executed in buff brick and stone with stepped pilasters and a projecting entrance pavilion. The current renovation project intends to preserve the main 1930 building (identified as Building B in the plan documents) (Figure 7) as well as additions to the high school made in 1955 and 1972 (Buildings D, E, and F) (Celli-Flynn Brennan, OWP/P, and the Mt. Lebanon School District 2008). The plan will remove Building A from 1928, which housed the boiler room, and Building C from 1972, and it will add an academic wing and an athletics field house to the complex. Despite later additions to the main 1930 building, the Mt. Lebanon High School retains sufficient integrity to contribute to the significance of the historic

Mt. Lebanon Historic District  
Name of Property

Allegheny County, PA  
County and State

district; later additions to the campus, such as the new construction and existing stadium structure, however, are non-contributing.

The Mt. Lebanon Historic District also contains three substantial greenspaces within its boundary. The northernmost is the 76-acre Mt. Lebanon Cemetery, which was established in 1874 and includes a late nineteenth century caretaker's house as part of its property (Photograph 34). It is the earliest extant resource of the historic district and, as such, it determines the beginning of the period of significance. The cemetery, which is located at 509 Washington Road, features a curvilinear layout of circulation paths with gently rolling hills and stately trees in the manner of the Rural Cemetery Movement, which embraced a romantic vision based on English landscape gardening. A wrought iron fence surrounds the cemetery and two stone pillars from 1899 mark its entrance. The caretaker's house is a two-story frame house with bargeboards and scroll sawn porch brackets that is oriented perpendicular to the main road. Main Park, a 51-acre park located off Cedar Boulevard, was already established during the period of significance though the original bath house and swimming pool that were formerly located at the center of the park are no longer extant. The park itself, which features ball fields, playgrounds, and basketball and tennis courts, is considered a contributing site, but the recreation center, tennis center, and current pool house that have been built within the park after the period of significance are considered non-contributing resources. The 42-acre Bird Park, which is located off Beadling Road, is considered a contributing site. Though it wasn't dedicated as a named park until 1967, historical mapping and aerial photographs show that the parkland remained undeveloped through the period of significance. Bird Park consists of wooded steep terrain with a stream channel, nature trails, athletic fields, and picnic pavilions.

### **Integrity Statement**

The Mt. Lebanon Historic District retains integrity. An inventory of the 4,252 resources within the 1,306-acre historic district identifies 3,341 contributing buildings, 879 non-contributing buildings, 21 contributing sites, 8 non-contributing sites, and 3 non-contributing structures. Less than 21 percent of the inventoried resources are non-contributing, which is due primarily to insufficient age but also to loss of integrity. A significant portion of these non-contributing resources were built in the years following World War II shortly after the period of significance; they are houses that were built with a similar style, set back, and mix of materials in existing residential plans that had been laid out during the period of significance, and, as such, they do not detract from the historic feeling of the surrounding residential plans (e.g., the houses located at the southern limits of the Seminole Hills plan or the northwestern limits of the Virginia Manor plan). Non-contributing resources can be found in most areas of the historic district either as isolated instances or in small groupings of later development. In particular, there are non-contributing resources among the commercial structures in the Uptown area of Washington Road, including a new public safety center (2003), a new hotel (2013), a parking garage, a block-long hardware store, an International Style modern office building, an apartment high-rise, and the light rail transit system station that was constructed in the late 1980s with a new underground tunnel (Photograph 35). These modern resources do not compromise the integrity of the district. They represent a very small percentage of the historic district resources overall, and they do not detract from the historic feel of the Uptown commercial district which maintains the scale, design, and materials of its historic appearance.

The Mt. Lebanon Historic District retains integrity of location. The resources of the historic district remain in the historic location where they were constructed, and Mt. Lebanon's location as a suburb of Pittsburgh is preserved. The historic district also retains integrity of setting. The mature trees and retained streetscape elements of the residential plans (including many brick paved streets, grassy islands, parklets, and rolled curbs) add to the sense of the historic early automobile suburb. The presence of two historic business districts, numerous churches and schools, and public greenspaces without notable modern intrusions enhances the setting of the historic district.

Overall, Mt. Lebanon's resources retain integrity of design, workmanship, and materials. Common residential alterations that affect integrity (e.g., the use of replacement siding, roofing, or windows) are less frequent and more sensitively applied here than commonly found elsewhere, and the historic character of individual homes is generally valued. The shared aesthetic of the neighborhood makes a non-contributing house with a prominent front garage and a mostly concrete front yard from ca. 2005 stand out from its neighbors in the Mission Hills plan. The fact that a majority of the houses are built of stone and/or brick is also a likely reason why the exquisite workmanship and material integrity of the structures remains intact; frame houses tend to be re-sided and altered with greater frequency than their stone or brick

Mt. Lebanon Historic District

Name of Property

Allegheny County, PA

County and State

counterparts. In Mt. Lebanon's commercial districts along Washington Road and Beverly Road, alterations to the first floor storefronts of historic buildings with large plate glass windows and non-historic facing materials are common. The upper floors and overall scale and siting, however, still convey their historic appearance. The design of the residential plans and the layout of the municipality are also intact with the survival of the historic curvilinear street patterns, generous lots with ample setbacks, and traffic islands. In some instances, changes to the historic design of Mt. Lebanon have resulted in non-contributing sites such as the township park at North Meadowcroft Avenue or the parking lot at 17 Academy Avenue, which are considered non-contributing sites because they replaced houses from the historic era. The grounds of the contributing Mt. Lebanon High School building and the later built additions to the campus are jointly considered a non-contributing site due to a loss of integrity.

The feeling and association of the historic district is particularly strong. Neighborhood after neighborhood, the historic character of Mt. Lebanon is palpable. The large scope of the historic district, which includes 4,252 resources, paired with the high quality of the planning fully conveys the aesthetics and historic sense of a premier early automobile suburb. The extensiveness and distinction of this early automobile suburb is immediately perceived and constantly reinforced in the historic district, and its association with those early planning efforts is clear.

## 8. Statement of Significance

### Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ B Property is associated with the lives of persons significant in our past.
- ☐ C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ D Property has yielded, or is likely to yield, information important in prehistory or history.

### Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- ☐ A Owned by a religious institution or used for religious purposes.
- ☐ B removed from its original location.
- ☐ C a birthplace or grave.
- ☐ D a cemetery.
- ☐ E a reconstructed building, object, or structure.
- ☐ F a commemorative property.
- ☐ G less than 50 years old or achieving significance within the past 50 years.

**Period of Significance (justification)**

The period of significance begins with the establishment of the historic district's earliest extant historic resource, the Mt. Lebanon Cemetery, in 1874 and ends with the approximate end of early automobile-oriented suburban development in the township around the end of World War II ca. 1945.

**Criteria Considerations (explanation, if necessary) N/A**

**Statement of Significance Summary Paragraph** (Provide a summary paragraph that includes level of significance and applicable criteria.)

The Mt. Lebanon Historic District meets NRHP Criterion A in the area of Community Planning and Development as a premier early automobile suburb in the Pittsburgh region. The district, consisting of 38 residential subdivisions, two commercial districts, seven historic churches, six public schools, two large parks, and a cemetery, was at the forefront of suburban planning during the early automobile era in the region. With curvilinear streets, large lots with ample setbacks, planned vistas, and commercial, cultural, and institutional amenities, the historic district clearly showcases the planning tenets of the era's suburbs. The period of significance begins with the earliest extant resource in the district, the Mt. Lebanon Cemetery of 1874, and ends in ca. 1945 with the end of World War II and the end of the era of early automobile suburbs

---

**Developmental history/additional historic context information**

The area of present day Mt. Lebanon was once inhabited by the Delaware and Shawnee tribes, and its central roadway, Washington Road, got its start as an Indian path. As part of William Penn's vast "New Purchase" of land from the Six Nations Iroquois Confederation, the area was opened up to European settlement in the late eighteenth century. Early settlers were predominantly Scots-Irish farmers who raised corn and rye, which they often converted to the more lucrative commodity of whiskey. The nineteenth century saw much of present day Mt. Lebanon cleared for farms and orchards with many of the major roadways (e.g., Washington Road, Cochran Road, Bower Hill Road, and McFarland Road) established as dirt wagon roads (Historical Society of Mount Lebanon 2011:7). The Mt. Lebanon Cemetery, which was established in 1874, represents this period of development.

In July 1901, a trolley line was constructed down the center of the northern part of Washington Road to provide access to and from downtown Pittsburgh. The trolley tracks ended at Cedar Boulevard, and a shuttle located at Washington Road and Alfred Street was introduced to carry travelers to the southeast to Castle Shannon (Mt. Lebanon Magazine 2000:8). The shuttle was later replaced with dedicated tracks. The arrival of the streetcar line in 1901 spurred development of Mt. Lebanon's first real estate subdivision called the Mt. Lebanon Plan, which was located at Shady Drive, Academy Avenue, and Cedar Boulevard (see Figure 4) (Historical Society of Mount Lebanon 2011:7, 21). Within four years, at least 11 additional subdivisions were approved for the area (Historical Society of Mount Lebanon 2011:7). One of them, the Clearview Plan of 1902, advertised the area as

The beautiful suburb: The cleanest spot in greater Pittsburgh. Healthful (no smoke, soot or fog),  
Convenient (home to office in 25 minutes) and Picturesque (Mt. Lebanon Magazine 2000:9).

The assessment seems premature in its claim of a beautiful suburb in an area that was still essentially rural, but it clearly marks the direction that development in Mt. Lebanon was heading. It also points out one of the early recognized advantages of suburbs in general, and of early twentieth century, rapidly-industrialized Pittsburgh's suburbs in particular—a clean, healthful environment away from smoke and soot. The suggestion of a convenient commute had just been

Mt. Lebanon Historic District

Name of Property

Allegheny County, PA

County and State

realized. Prior to the arrival of the trolley line, the greater South Hills area was separated from Pittsburgh by the Mt. Washington escarpment, which made travel to or from the city arduous, time-consuming, and expensive (Figure 8). The trolley, which ran through a narrow trolley tunnel, improved access and encouraged dramatic development in communities north of Mt. Lebanon on the line. The neighboring Borough of Dormont located to the north of Mt. Lebanon, for example, experienced a trolley-era building boom that is evident in its dense grids of brick Foursquare houses from the 1900s and 1910s. The trolley was not sufficient, however, to serve the growing population of the South Hills.

After two unsuccessful attempts, the “progressive citizens of Mt. Lebanon” succeeded in separating from Scott Township and forming the Township of Mount Lebanon in 1912 (Mount Lebanon’s name was officially changed to Mt. Lebanon in 1975 when it became a home rule municipality) (Historical Society of Mount Lebanon 2011:8). The Mt. Lebanon residents’ desire for improvements like street crossings, boardwalks, streetlights, fire and police protection, and improved schools reflected the increasingly suburban character of the township as opposed to its decidedly rural neighbor (Historical Society of Mount Lebanon 2011:8). In 1912, the new Mt. Lebanon Township was home to 1,705 residents and only six automobiles (Historical Society of Mount Lebanon 2011:8).

Beginning in the early 1900s, many of Mt. Lebanon’s residents joined in a campaign supporting the construction of a traffic tunnel leading from Pittsburgh through Mt. Washington to the South Hills to improve access and support development. “A total of at least six separate tunnel projects were proposed and contemplated before the county finally decided in 1919 on the current site of the Liberty Tubes” (Hoffman 1992b:131). The competing interests of different South Hills communities, land speculators, and businessmen resulted in a “geographical partisanship” that manifested in the creation of organized lobbying groups including the South Hills Board of Trade (1908) and its splinter group the South Hills Tunnel Association, which sponsored the alternative that would best suit Mt. Lebanon’s interests (Hoffman 1992b:131).

In the meantime, speculators, developers, and local landowners in Mt. Lebanon began a frenzy of subdividing former farm properties into residential plans in advance of the tunnel construction. Table 1 lists the major subdivisions in the Mt. Lebanon Historic District based on historic mapping and plat maps on file at the Municipality (see Figure 1) (G.M. Hopkins 1940; Mt. Lebanon Municipality Geographic Information System 2012). Many of these residential subdivisions were subject to multiple additions and amendments, and a few of them seem to have superseded earlier plans that were approved but not developed (Historical Society of Mount Lebanon 2011:7). A composite aerial photograph of Mt. Lebanon from 1939 shows the realization of these early residential plans and surrounding farmland (Figure 9) (USDA 1939b-e).

When the Liberty Tubes, “the world’s first long automobile traffic tunnel,” finally opened in 1924 at a location that did indeed benefit Mt. Lebanon’s interests, its impact on the South Hills was dramatic (Hoffman 1992b:136). “The opening of the Liberty Tubes in 1924 not only increased transportation access to the city, but sparked a residential building boom in the rolling hills south of the city as well” (Hoffman 1992b:128). Between 1920 and 1930, the population of Mt. Lebanon went from 2,258 to 13,403, marking an increase of 493.6 percent (Table 2) (Hoffman 1992b:139).

(excerpted from Hoffman 1992b:139)

An assessment of this dramatic impact written in 1930 just six years after the opening of the Liberty Tubes concluded

The South hills (*sic*) district has absorbed more than 30,000 new people [since 1920], and continues to attract more. The reasons for this are the new tunnels and highways built in recent years, better street-car service, a comparatively clean atmosphere, hilly areas, and the activity of real estate firms. One has merely to stroll *or drive slowly* [emphasis added] through Mount Lebanon with its Mission Hills and Beverly Heights sections to see a most attractive sight—rolling country, with homes of brick and stone and roofs of red, brown, gray, and green colors, all with lawns and young trees (Von Bernewitz 1930:22-23).

When Lawrence T. Stevenson of Stevenson, Williams, and Johnston Realtors developed the Mission Hills plan in 1921 on the site of a former dairy farm and orchard, he “was acting in anticipation of the planned 1924 opening of the Liberty Tunnels, which were already under construction. Like other developers and landowners who had speculatively purchased land in the South Hills, Stevenson was one of the biggest boosters of the tunnels and of a traffic route that would eventually come through Mt. Lebanon” (Historical Society of Mount Lebanon 2011:30; Conti 2003:2-3). Stevenson was also a local pioneer in suburb design, who was profoundly influenced by the 1913 design of a picturesque suburb in Mission Hills, Kansas City by the nationally known developer J.C. Nichols. Nichols’ development eschewed the typical regularized grid for a layout that recognized the potential that the automobile held for suburban development and exploited its possibilities. “The landscape architecture firm of Hare and Hare, working for Nichols over a 20-year period beginning in 1913, modified the rectilinear grid so that many of the roads running east to west followed the contours of the rolling topography rather than the straight, parallel lines drawn by the land surveyor. Departure from the grid enabled the designers to create triangular islands at the site of intersecting roads which were developed as small parks and gardens” (Ames and McClelland 2002:37). The automobile had the potential to liberate subdivision design. Roads (which were

Mt. Lebanon Historic District

Name of Property

Allegheny County, PA

County and State

often reframed as drives) could be longer with fewer cross streets and lots could be larger, when walking distances were no longer a major determining factor. “In both of the Mission Hills developments [Mt. Lebanon and Kansas City], the developers also made certain that the streets had vistas—engaging views along curved streets, accented by extra-large lots strategically placed to hold large signature houses that would set the neighborhood’s tone and character” (Conti 2003:2).

The difference between the residential plans like Mission Hills and those that preceded them is dramatic. A historic aerial photograph from 1936 offers a view looking north across the northern part of the Mt. Lebanon Historic District (Figure 10). With few exceptions, the residential areas pictured are laid out in rectilinear grids. The areas immediately east and west of the Uptown commercial section of Washington Road contain some of Mt. Lebanon’s early trolley-era developments. By contrast, the layout of Mission Hills with its gently curving streets, common park areas, and 342 generous lots represents a very different sensibility (see Figure 2). The distinction of the Mission Hills development relied on other factors as well. Mission Hills

was decisively shaped by what were called ‘restrictions’—specifications written into land sales agreements or deeds that limited what an owner could build, how he could build, and what he could do in the future with his house and land. Indeed, Mission Hills . . . was advertised by Stevenson as ‘the restricted suburb’ to emphasize these controls and the stability they promised (Conti 2003:2).

Advertisements for the Mission Hills plan promised that the potential homeowner would be “surrounded by single family homes only” and that restrictive covenants would “protect the value of their property for fifty years” (Brown 2007:29). Stevenson was responsible for the overall layout of the subdivision and its governing restrictions, but he did not build any of the houses. Lots were developed individually by the landowner or several at a time by speculators, who enlisted the architects and contractors of their choice. The great variety of architectural expression in the Mission Hills plan (repeated in other Mt. Lebanon plans) derives from the more than 50 different architects and contractors at work within the subdivision (Historical Society of Mount Lebanon 2011:30). In the listings of the Building Bulletin in Pittsburgh’s local architectural journal, *The Charette*, several of the Pittsburgh architects who worked in Mission Hills were identified (The Charette 2012). Lamont H. Button shared photographs of three red brick Tudor Revival houses with steep cross gables that were completed to his designs in 1928. Ralph M. Reutti (1926), C.R. Geisler (1927), and Harry Vieham (1928) solicited bids from contractors for the construction of their brick house designs. Richard Irvin publicized a three-story house made of Philadelphia stone and cut sandstone trim with 11 rooms and 3 baths in 1927.

Stevenson followed his success at Mission Hills with the layout of the Beverly Heights plan ca. 1925 (Conti 2003:4). It incorporated many of the same features: gently curving streets that follow natural contours, generous common area parks and triangular parklets, automobile-friendly rolled curbs and sidewalks, generous lot sizes with signature properties at focal points, and long vistas. Other developments followed suit incorporating similar devices as at Seminole Hills (247 lots laid out in 1925 by Christian Shannon) and St. Clair Terrace (138 lots laid out in 1925 by J.C. Roush) (Brown 2007:26). F.E. McGillick purchased about 100 acres in the early 1920s for the Lebanon Hills Plan, which was designed with two entrances and several park spaces (Historical Society of Mount Lebanon 2011:31). Despite brisk early development, building in the plan languished during the 1930s and was only resumed after World War II. William J. Parker and W.A. Bode and Company developed the 250-lot Parker Gardens subdivision, which was “billed as one of the community’s more affordable neighborhoods” (Historical Society of Mount Lebanon 2011:34).

Development was generally undertaken by community builders or resident developers. A community builder “designs, engineers, finances, develops, and sells an urban environment using as the primary material rural, undeveloped land” (Weiss 1987:46-47). Stevenson, who served as a director of the National Association of Real Estate Boards, was a community builder as were Shannon, Parker, and Bode. They came to Mt. Lebanon, invested in farm properties, and developed residential subdivisions. In Mt. Lebanon, a significant number of subdivisions were also laid out by local resident-developers, who used their own farmland or purchased property to subdivide as a housing plan. Roush, Gillick, and Mary Haller, the developer of 31 lots in Hoodridge Plans 1 and 2 in 1925 and 1926, were resident-developers, who were local to Mt. Lebanon and often developed property that they had owned for some time (Brown 2007:26).

County and State

The Virginia Manor plan was developed in phases by community builder (and later Pennsylvania Governor and United States Senator) James Duff beginning in 1926. Like Stevenson's Mission Hills, Duff's second phase Virginia Manor (1937) follows the contours of the ridge, offers vistas and scenic views, accords extra prominence to signature houses at focal point lots, and stipulates deed restrictions with the added condition of architectural oversight (Figure 11).

For Virginia Manor, developer James Duff hired [architect] Thomas Garman . . . to supervise and approve all designs. Lot buyers in Virginia Manor had to agree to submit their house designs for Garman's approval. If they disagreed with him, the deeds named two prominent Downtown [Pittsburgh] architects of the day whom they could appeal to. It's not known if anyone may have done that, but it is clear that Garman enforced a pattern on the Manor, and not surprisingly, he designed many of the houses himself. His original restrictions required, among other things, stone or brick construction and slate or tile roofs and mandated that all garages be at the side or rear of the houses (Conti 2012b).

Figures 12 and 13 provide detailed maps of sections of the Mt. Lebanon Historic District from 1940 (G.M. Hopkins & Co. 1940). Plate 18 of Figure 13 shows the northern part of the district, including trolley era and early automobile era neighborhoods as well as several of the district's commercial, cultural, and institutional amenities. The trolley line is visible running down the center of Washington Road until it turns to the southeast at Alfred Street. It passes two historic revival stone churches (the Mt. Lebanon United Presbyterian Church and St. Bernard's Roman Catholic Church), the Mt. Lebanon Cemetery with its picturesque circulation paths, and the Uptown commercial district. The plans that were initially laid out in the trolley era and developed over the following decades lie at the center of the map. They include the Clearview Plan (1902), Mt. Lebanon Plan (1901), and Mt. Lebanon School Plan (ca. 1905) to the west of Washington Road and the Mt. Lebanon Park Plan (1902) and Central Square (ca. 1905) to the east of Washington Road. Plate 20 of Figure 13 shows the northwest corner of the district with the then newly developed Virginia Manor plan (1937). Surrounded to the west and south by farmland (including the Clatty Farm, which was newly platted for residential subdivision in 1940 and which lies outside the historic district boundary), Virginia Manor and the other early automobile suburbs pictured employ curving roads that take advantage of the topography to enhance vistas and highlight signature building lots. At Marlin Place, for instance, a triangular parklet framed by gently curving roads provides shared greenspace for the neighborhood (upper right corner of map).

Plate 22 of Figure 13 shows the Mission Hills plan (upper left), Lebanon Hills plan with its pre-World War II layout (left), the entrance to Beverly Heights (lower left), St. Clair Terrace (lower left), and part of Hoodridge Plan (center bottom). These plans have embraced the ideals of early automobile suburb design with their gently arcing drives that trace the ridge contours and form curved triangular parklets that are planted with grass and trees. Their lot sizes are generous with ample front yards and setbacks from the street. Plate 23 of Figure 13 shows similar configurations with the Beverly Heights and Seminole Hills plans that were laid out with the automobile in mind.

The rapid growth of the population and development of the residential plans necessitated the building of new schools in Mt. Lebanon. Washington Public School, which opened in 1922 with 400 students, was the first new school building constructed after the formation of the township (Historical Society of Mount Lebanon 2011:39). In 1925, Washington School had 765 students, and Lincoln School was added to accommodate the increased enrollment; by 1932 there were nearly 3,000 students (Historical Society of Mount Lebanon 2011:39). The Pittsburgh architectural firm of Ingham & Boyd was responsible for the design of six of Mt. Lebanon's schools (Historical Society of Mount Lebanon 2011:41). Many of Mt. Lebanon's houses of worship were also built during the period of significance including Mt. Lebanon United Presbyterian Church, St. Bernard's Roman Catholic Church, Southminster Presbyterian Church, St. Paul's Episcopal Church, and the First Church of Christ, Scientist (Brown 2007:40). The commercial area on Beverly Road was developed beginning in 1925 and the majority of surviving historic commercial buildings in Washington Road's Uptown area date from the 1920s.

The rapid development of Mt. Lebanon, particularly in the interwar period, can be measured by the number of building permits issued (Mt. Lebanon Municipality Geographic Information System 2012). Through the 1920s and early 1930s, hundreds of building permits were issued yearly with 424 permits recorded in the peak year of 1928 (Table 3). A slight lull in permit applications from 1932 to 1935 can be attributed to the Great Depression, but it is significant that

Mt. Lebanon Historic District

Name of Property

Allegheny County, PA

County and State

building did not stop during this period and that it regained momentum before the end of the economic crisis. During World War II, however, there was a full stop to building in Mt. Lebanon. Due to this clearly defined break in the building history of Mt. Lebanon, the end of World War II marks the end of the period of significance for the historic district.

(Mt. Lebanon Municipality Geographic Information System 2012)

After World War II, the number of building permits issued exceeded at least 100 permits yearly for the years 1946 through 1963 with peak years in 1947 (n=325), 1950 (n=338), and 1955 (n=323) (Mt. Lebanon Municipality Geographic Information System 2012). When building resumed, some of the earliest postwar houses were constructed on vacant lots in the existing subdivision plans. Many of them continued in the same styles as the earlier houses. By the 1950s, though, split-levels, ranches, and minimal traditional houses became more common. It was during this period that Ed Ryan of Ryan Homes began his home building business in Mt. Lebanon, which became one of the top builders nationally with an “unmatched record of sustained growth in sales and earnings operating in many different markets” (Eichler 1982:120). By 1959, Ryan Homes was building about 500 homes per year by prefabricating many of the component parts and streamlining construction (Eichler 1982:120). Several late twentieth and early twenty-first century residential plans have been added to the municipality, including the Main-Line townhome development from ca. 2005 located near the light rail facilities that were constructed in the late 1980s. The community is committed to preserving its historic character as

Mt. Lebanon Historic District  
Name of Property

Allegheny County, PA  
County and State

evidenced by the preparation in 2002 of a historic preservation plan for the municipality and the celebration in 2012 of Mt. Lebanon's 100<sup>th</sup> anniversary (Mt. Lebanon Historic Preservation Board 2011).

**Narrative Statement of Significance** (Provide at least **one** paragraph for each area of significance.)

The Mt. Lebanon Historic District is significant under NRHP Criterion A for Community Planning and Development as a premier early automobile suburb. The National Register Bulletin devoted to Historic Residential Suburbs defines a historic residential suburb as

a geographic area, usually located outside the central city, that was historically connected to the city by one or more modes of transportation; subdivided and developed primarily for residential use according to a plan; and possessing a significant concentration, linkage, and continuity of dwellings on small parcels of land, roads and streets, utilities, and community facilities (Ames and McClelland 2002:4).

Historically, suburbanization in the United States can be divided into four distinct eras beginning with the *Railroad and Horsecar Suburbs, 1830 to 1890* (Ames and McClelland 2002:16). In this era, railroads built passenger stations in outlying villages that then grew and developed by virtue of their rail access to a city. Mt. Lebanon remained a rural area through the nineteenth century and did not participate in this era of suburbanization. In Pittsburgh, however, this phenomenon began in the late 1850s. Railroads were plentiful in the Pittsburgh region because of the intensive industrialization of the area, but they were constrained by the rugged terrain. Early railroad suburbs developed to the east of Downtown in Oakland, Shadyside, East Liberty, Homewood, and Wilksburg. They also developed to the northwest along the Ohio River route of the Pittsburgh & Lake Erie Railroad at Bellevue, Avalon, Ben Avon, Emsworth, and Sewickley and to the southwest in Crafton, Rosslyn Farms, and Thornburg (Allegheny County Comprehensive Plan Design Team 2008:3-10). Escarpments like Mt. Washington hampered the development of railroad routes to the South Hills in the mid to late nineteenth century.

The era of the *Streetcar Suburbs, 1888 to 1928* (also known as the trolley era) was characterized by development that "concentrated along radial streetcar lines, streetcar suburbs extended outward from the city, sometimes giving the growing metropolitan area a star shape" (Ames and McClelland 2002:17, 20). Streetcar suburbs developed as continuous corridors rather than as nodes like the earlier railroad suburbs. "Because the streetcar made numerous stops spaced at short intervals, developers platted rectilinear subdivisions where homes, generally on small lots, were built within a five- or ten-minute walk of the streetcar line" (Ames and McClelland 2002:20). The establishment of a streetcar line connecting Mt. Lebanon to the City of Pittsburgh in 1901 encouraged discrete pockets of growth, with a few subdivisions that were laid out on the characteristic rectilinear grids in close proximity to the trolley. The streetcar had a more profound effect, however, on the communities north of Mt. Lebanon that were closer to the city like Dormont and Brookline, where extensive trolley era development occurred. Beginning in the 1890s, the City of Pittsburgh expanded rapidly to the east, the north, and to the south along the streetcar lines. Streetcar suburbs included multiple East End neighborhoods like Shadyside, Oakland, Friendship, and Point Breeze; areas to the northeast along the Allegheny River like Aspinwall, Verona, and Oakmont, and to the aforementioned South Hills communities like Brookline, Dormont, Brentwood, Whitehall, and (to a lesser extent) Mt. Lebanon. During its peak, Pittsburgh Railways, the dominant transit agency, had over 600 miles of track on nearly 100 trolley routes (Allegheny County Comprehensive Plan Design Team 2008:3-10).

The era of the *Early Automobile Suburbs, 1908 to 1945* is the one that best defines the Mt. Lebanon Historic District (Ames and McClelland 2002:21). Early automobile suburbs took a different form than the earlier streetcar suburbs.

With commuters no longer needing to live within walking distance of the streetcar line, residential suburbs could be built at lower densities to form self-contained neighborhoods that afforded more privacy, larger yards, and a park-like setting. Neighborhood improvements typically included paved roads, curbs and gutters, sidewalks, and driveways, as well as connections to municipal water systems and other public utilities (Ames and McClelland 2002:22).

Mt. Lebanon Historic District

Allegheny County, PA

County and State

In anticipation of the opening of the Liberty Tunnel, Mt. Lebanon transformed itself into an early automobile suburb. The subdivisions were designed with regard to the automobile. The plans were situated farther away from the trolley line; their designs incorporated driveways and garages; and their success depended on eventual access to the city by automobile. In 1921, the Mission Hills plan was laid out as an elegant response to the question of how to design for automobile-dependent residents. Based on the nationally lauded design of J.C. Nichols' same named plan in Kansas City, this plan with curving streets that tame the contours of a steeply sloping site, broad vistas, parks and common areas, generously scaled lots, and a rich variety of historic revival houses built primarily of brick and stone is not simply a copy of a good idea. The Mission Hills plan, and many others in Mt. Lebanon that followed it and learned from it, synthesized those principles into highly successful designs that were tailored to their locations. The Mt. Lebanon Historic District provides a rich, layered, and nuanced example of a superlative early automobile suburb.

The creation of new roads for automobiles beginning in the 1900s led to suburban development over a wider area of greater Pittsburgh than was influenced by the railroads or trolleys. In addition to the Liberty Tubes, the development of the Lincoln Highway and a system of Grand Boulevards (including the Ohio River, Allegheny River, Mossdale, Saw Mill Run, Bigelow, and Baum Boulevards as well as the Boulevard of the Allies) provided easier automobile access from the city to suburbs to the north (Brighton Heights, West View, Aspinwall, Fox Chapel), east (Squirrel Hill, Highland Park, Point Breeze, Churchill), south (Mt. Lebanon, West Mifflin, Pleasant Hills), and west (Sewickley Heights, Sheraden, Thornburg) (Baum and Muller 2006:148). While many early automobile suburbs were developed in the Pittsburgh area in this period, none demonstrate the breadth and scope, the depth and concentration, or the quality and distinction of Mt. Lebanon. The extent of the early automobile suburb in Mt. Lebanon is significant. The historic district provides not merely one or two characteristic residential plans but more than three dozen neighborhoods that include 4,252 resources in a 1,306-acre area. Because the rapid residential development of Mt. Lebanon was concentrated in a roughly twenty year period, new residential planning models that were being created and tested against the needs of the homeownership motorist are prevalent in the historic district without the intrusion of significant earlier development (rural or trolley era) or later postwar suburban development. The high quality of the planning also distinguishes Mt. Lebanon from neighboring communities of the era.

The final historic era of suburbanization concerns *Post-World War II and Early Freeway Suburbs, 1945 to 1960* (Ames and McClelland 2002:24). Called "the most dramatic stage of suburbanization in the United States," these postwar subdivisions were "fueled by increased automobile ownership, advances in building technology, and the Baby Boom" as well as nationwide highway construction (Ames and McClelland 2002:24). Mt. Lebanon continued to grow rapidly during this period, but the housing plans from this era do not feature the singularity of the earlier plans from the 1920s and 1930s. They tend to follow national patterns and models and have been excluded from the historic district boundary. The postwar era saw the rapid suburbanization of communities like Moon Township in the west (whose growth was spurred by the establishment of the Greater Pittsburgh Airport and an interstate highway link to the City of Pittsburgh); Ross Township, Allison Park, and Springdale in the north; Monroeville, Penn Hills, and Wilkins Township in the east; and West Mifflin, Upper St. Clair, and Bethel Park in the south.

The rapidity of the development of the area, the distinction of the residential plans, and the subsequent care and preservation that the Mt. Lebanon Historic District resources have received demonstrate the singularity of the district. In 1912, there were only six registered automobiles in the township, but by 1934 there were 3,966 cars (Brown 2007:22). The population of the township increased by almost 500 percent within the ten year period from 1920 to 1930, easily outpacing other South Hills communities (Hoffman 1992b:139). A 1944 discussion of local housing issues stated that only 7 percent of the houses then standing in Mt. Lebanon were built before 1920 (Borland 1944:4). Nationwide, the 1920s experienced increased construction of housing. "Housing production peaked in 1925, and by the end of the decade, when a new economic crisis forced the cessation of construction, an average of 703,000 new dwellings a year had been built" (Loeb 2001:6). The increased housing construction and rapid development of suburbs during this period is often attributed to the advent of the automobile and improved road systems; the movement of the population caused by industrialization during World War I; and the availability of home financing through local building and loan associations (Loeb 2001:6, 144). For Mt. Lebanon, the opening of the long awaited transportation link to Pittsburgh, the promise of

Mt. Lebanon Historic District

Name of Property

Allegheny County, PA

County and State

clean air away from the city, and the growing wealth of Pittsburgh's industrialists and business elite were additional influences on the growth of the suburb.

The Mt. Lebanon Historic District's significance for community planning and development is also demonstrated by the active engagement of a variety of residential developers who shaped the early automobile suburb. Foremost among them is Lawrence T. Stevenson, who drew on the automobile suburb model developed by J.C. Nichols in Mission Hills, Kansas and adapted it to the terrain and circumstances of Mt. Lebanon. In a statement from 1925, Nichols explained that residential streets

should be planned as to eliminate alleys, follow the contour of the land, be fitted to the lots and blocks, afford sites of interesting shapes, and permit individual landscape treatment. They should preserve and reveal vistas, creating street pictures . . . Building lines should not be uniform, but should be varied according to site and view; blocks should be treated as a unit; and, wherever possible, harmonious group planning and collective building should be carried out. Residence streets should have a cozy, domestic character, be quiet, self-contained, garden-like (Loeb 2001:166-167).

Stevenson's real estate development firm Stevenson, Williams and Johnston Company was incorporated in 1919 with offices in downtown Pittsburgh, where "a business strategy was mapped out that would take the company to its present location in Mt. Lebanon. These three men agreed that the future lay within the rich, wide-open farmlands to the south of the city" (Stevenson Williams Management Company 2013). Stevenson was a community builder, who laid out the influential Mission Hills plan in 1921 and the Beverly Heights plan in ca. 1925. In 1927, the firm relocated to Mt. Lebanon's Uptown business district. Stevenson remained active in the industry and served as the president of the Pittsburgh Real Estate Board, as the president of the National Association of Real Estate Boards in 1932, and as a presidential appointee to help establish a central discount bank for home mortgage financing during the Great Depression (Stevenson Williams Management Company 2013). Another community builder was W.A. Bode and Company, which developed the Parker Gardens and Sunset Hills (which lies outside the historic district boundary) residential plans. James Duff served as the developer of Mt. Lebanon's Virginia Manor plans, which were built in phases from the mid-1920s through the 1930s, before serving as Pennsylvania's Governor and a United States Senator. Mt. Lebanon was also reshaped by resident-developers, local landowners who laid out subdivisions and often invested in land speculatively in advance of the opening of the tunnels in order to capitalize on the anticipated influx of homebuyers. Mary Haller was a resident-developer. As a local businesswoman, she purchased the Hood farm and laid out the Hoodridge plan of lots with her sons in the mid-1920s (Jackson 2007).

## Comparisons

The construction of the Liberty Tubes in 1924 provided great opportunity for development to the South Hills suburbs of Pittsburgh, but nowhere was its impact as dramatic as in Mt. Lebanon. For instance, the population of the neighboring Borough of Dormont to the North more than doubled between 1920 and 1930 (in comparison to an increase of almost 500 percent in Mt. Lebanon), but because its dense gridded street layout was already established during the trolley era, the neighborhoods that continued to be built did not exhibit the same suburban characteristics as in Mt. Lebanon (Hoffman 1992b:139 and G.M. Hopkins & Co. 1916). Other surrounding communities, which, like Mt. Lebanon, were more rural in character before the tunnels opened, did not have the same direct access to the city or the same concerted effort by developers that encouraged Mt. Lebanon's dramatic growth in this period. While municipalities like Scott Township, Bethel Park, and Upper St. Clair did participate in the general building boom of the era (though not close to the degree of frenzied building activity in Mt. Lebanon), the residential plans that were built there tended to be less innovative in their response to topography challenges and their appreciation of aesthetics, and the townships still maintained a strong rural character at the onset of World War II. (USDA 1939a-e; G.M. Hopkins & Co. 1940).

Figure 14 presents four maps of Mt. Lebanon's neighboring municipalities that are contemporary to the Mt. Lebanon maps in Figure 13 (see Figure 12 for index) (G.M. Hopkins & Co. 1940). Plate 14 of Figure 14 predominantly shows the Brookline neighborhood of the City of Pittsburgh, which is located to the northeast of Mt. Lebanon and was

Mt. Lebanon Historic District

Name of Property

Allegheny County, PA

County and State

known as the Borough of West Liberty until it was annexed by the city in 1908. It was served by a trolley which ran down Brookline Boulevard, which featured commercial, institutional, and residential buildings. The planning demonstrated in Brookline consists of a regularized grid of perpendicular streets with houses that are either sited very close to their neighbors or that share party walls as rowhouses. The majority of the houses shown on the map were constructed of brick and date from the first two decades of the twentieth century. Brookline reflects the trolley era of suburban development with its densely sited modest brick houses and regularized grid. It does not exhibit the early automobile suburb hallmarks that characterize the Mt. Lebanon Historic district, such as the curvilinear streets with parklets, attention to sightlines and vistas, or generous lots for houses of great architectural variety. Plate 16 of Figure 14 shows the Borough of Dormont located immediately north of Mt. Lebanon. The map shows the trolley line running down the center of Washington Road/West Liberty Avenue. Like Brookline, Dormont is characterized by tight rectilinear grids of densely sited brick houses. Its growth during the early automobile era was already determined by the street layout that dates from the early twentieth century trolley era layout.

Plate 26 of Figure 14 shows parts of Castle Shannon Borough and Baldwin Township, which are located to the east of Mt. Lebanon. The communities were served by the streetcar line of the Pittsburgh Railways Company and by the freight hauling Pittsburgh and West Virginia Railway, which connected local coal mines and heavy industries with distant markets. Several residential subdivisions were platted in the area by 1940, but they were sparsely developed. Only the layout of the Rolling Hills No. 1 plan (top of the map) appears to respond to the contours of the land, but its tightly spaced brick houses with modest setbacks from the street contrast with the generous lots and shared greenspaces of many of Mt. Lebanon's plans. The map also shows two groupings of frame coal company houses located near the railway and intact farmland. Plate 28 of Figure 14 shows Bethel [Park] Township, which is located to the southeast of Mt. Lebanon. In 1940, this section of the township was characterized primarily by farmland and about a dozen sparsely developed residential subdivisions. Despite the presence of multiple railways and trolley lines, the area did not participate in the building frenzy seen in Mt. Lebanon. In 1933, 77.1 percent of Bethel [Park] Township's platted lots were vacant (Hoffman 1990:20).

In 1926, Mt. Lebanon was described in a local newspaper as "a beehive of building industry . . . a township of astounding growth, [and] remarkable change" (Hoffman 1990:19). It was frequently assessed as the premier South Hills municipality during the early automobile era. Mt. Lebanon was

incorporated in 1912 as a refuge for middle level managers who wanted to escape the smoke of the mills but could not afford the mansions of Shadyside and Sewickley Heights. In 1924 the Liberty Tubes, a pair of highway tunnels, cut through Mount Washington, and the community soon became the *prime residential address south of the city* [emphasis added] (Reichlin 1980:67)

Perhaps the best contemporary comparison to Mt. Lebanon in the Pittsburgh area is the affluent East End city neighborhood of Squirrel Hill, which became a center for speculative development and large scale construction of houses in the era from the early 1920s to the early 1940s. The arrival of the electric trolley to Squirrel Hill in 1893 spurred some development, but as late as 1910, the neighborhood was only sparsely settled. The population increased when the Boulevard of the Allies was created in the 1922 providing easy automobile access to downtown Pittsburgh (Tarr 1989:245). Like Mt. Lebanon, the houses built in Squirrel Hill in the 1920s and 1930s were larger and tended to be built of brick or stone. Unlike Mt. Lebanon, however, these houses were typically built on gridded city streets. Only a few small neighborhoods in Squirrel Hill employ curvilinear streets, and none of them approaches the sophistication of design of Mt. Lebanon's best suburban style plans (Figures 15 and 16). Figure 15 shows a 1939 map of a section of Squirrel Hill, which can be compared with the 1940 maps of Mt. Lebanon (see Figures 12 and 13). While much of Squirrel Hill was laid out in a rectilinear grid (despite the varied terrain) like the streets shown to the west of Shady Avenue, some sections employed long curving streets that responded to land contours (though to a lesser degree than a plan like Mission Hills). Beechwood Boulevard and Beacon Street (east of Shady Avenue) in particular demonstrate the generous lots, controlled vantage points, ample setbacks, and architectural variety that characterize the best of the early automobile suburbs.

### Verbal Boundary Description (Describe the boundaries of the property.)

The boundary is described visually on the accompanying 21 map sheets at a scale of 1"=200'. The numbers shown within the individual parcels refer to the property's street address. In several cases, letters have been used to reference properties without a street address (e.g., traffic islands and parklets). See Site Plan.

### Boundary Justification (Explain why the boundaries were selected.)

The irregular historic district boundary has several determinants. The historic district is fully contained within the Mt. Lebanon municipal boundary. Based on historic mapping, historic aerial photographs, and building permit dates, the boundary describes areas that were largely developed within the period of significance (1874 to ca. 1945). In particular, detailed G.M. Hopkins & Company plat maps that were originally published in 1934 and then updated in 1940 became the primary resource to establish whether a building was likely to have been present during the period of significance (G.M. Hopkins & Company 1940). This map resource provided a consistent and accurate source when the building permit data that were filed with the county and the township were contradictory. Because Mt. Lebanon's areas of historic development were determined in large part by the varied topography, they result in a logical but irregular boundary. The historic district does not include all of the residential plans that were built in the period before ca. 1945, but it does represent a substantial part of that significant development. For instance, the Sunset Hills Plan, which is located to the east of the historic district, is an early automobile suburb that dates to the period of significance. It is, however, physically separated from the district by areas of later infill. In some cases, the end of historic street paving was used to delineate the boundary (e.g., in the Lebanon Hills Plan) because the street layout was established before 1945, even though the houses at the end of the earlier paving were built after the period of significance. This explains why the historic district ends in some places with non-contributing buildings. Care was taken to ensure that the character of historic Mt. Lebanon was accurately represented by including commercial districts, cultural and institutional buildings, and apartments and duplexes as well as residential plans that showcase neighborhoods of varying size, style, and affluence. Major roads were chosen as boundaries where possible to increase the legibility of the boundary (e.g., Scott Road, Washington Road, Mt. Lebanon Boulevard, Cedar Boulevard, Cochran Road, Bower Hill Road, and McFarland Road). Lastly, an attempt was made to limit non-contributing resources that were either built after the period of significance or have compromised integrity. The resulting boundary, while irregular, provides a nuanced representation of the historic character of Mt. Lebanon.

### Additional Documentation

---

Submit the following items with the completed form:

- **Maps:** A **USGS map** (7.5 or 15 minute series) indicating the property's location.

A **Sketch map** for historic districts and properties having large acreage or numerous resources. Key all photographs to this map.

- **Continuation Sheets**
- **Additional items:** (Check with the SHPO or FPO for any additional items.)

---

### Photographs:

---

Submit clear and descriptive photographs. The size of each image must be 1600x1200 pixels at 300 ppi (pixels per inch) or larger. Key all photographs to the sketch map.
